

Ordnance Survey Archers

Range Usage Guide V1.0

1. OS Car Park Entrance.
2. Shed for Signage.
3. Target Storage.
4. Nursery Parking (When nursery closed).
5. Signage location.
6. Full Range Shooting Line.
7. Range Distance Markers (20y/m to 100y/90m).

Range setup

1. Ahead of session Email OS security: **SECURITY@OS.UK**
2. Obtain signage and other range equipment from Shed (2). These are stored in our equipment trolley. Apart from range warning signs, the trolley contains spare target pins. Some spare target faces, shooting line tape, waiting line rope, 100m range measuring tape, score sheets and spare pens.
3. Place at points 5 across the grass and path. Make sure there are 6 signs across two path signs and 4 grass signs. Anchor grass signs with tent pegs through hole at base of signs and path signs with larger wooden stakes pushed down through the top. Stakes and pegs can be found on the equipment trolley.

4. 6 signs are needed here as this is the part of the range with the **most risk** as anyone walking along the path is walking towards the arrows and is visible from the shooting line therefore majority of signs need to go here.

Set up of range warnings at top end of the range

5. Line is a 30m tape measure which can be in the equipment trolley, alongside a second rope for an equipment line if needed. Place this along edge of building point 6 (Can be moved forward if full range not needed. Place the trolley to block the path at point 6. There are two further signs, one for the path and one for the grass. **Place them next to the trolley to make a highly visible barrier.**

Arrangement of range warning signs and trolley at shooting line

6. Be vigilant for walkers (Security sometimes wander the site).
7. **Everyone is responsible for range safety and for setting up and putting the range away.**
8. A named field captain is needed for every session. This is arranged via the Whatsapp group.
9. The Field Captain is responsible for overseeing the safe operation of the session
10. This means the following activities.
11. Follow AGB guidance for safe shooting and point out (politely) to archers if they are not – for example, walking around with a loaded bow, running on the range etc,
12. Ensuring the range warning signs are set up as described above.
13. Ensuring targets are moved safely to and from the range.
14. The wheeled foam targets must be secured to the ground using the peg and rope tie attached to the back of each target in high winds.
15. If using straw targets and the tripod stands, the straw targets must be secured to the ground every time, using the tie backs and pegs which are stored in the equipment trolley, and using two target pins to secure the tie backs to the straw boss. Make sure the rope is taught before securing to the ground with the peg. The tripods have either holes in the base of the

stands – use tent pegs to secure to the ground – or wooden T bars for tripods with screw eyes.

16. Controlling the timing of shooting and collection by means of voice or whistle commands. Before allowing archers to shoot, the field captain must take good look around the range to identify any issues or people walking on or toward the range. Only if the range is clear should the field captain give the signal to shoot (one whistle or voice command). Only when everyone has finished shooting and returned to the waiting/ equipment line should the captain give the signal to collect (three whistle blasts or voice command).
17. Encourage people to move quickly back to the waiting/ equipment line after collecting.
18. Try to keep the line running as quickly as possible to maximise the number of ends people can shoot in a.
19. Assist, or direct other to assist in resolving any problems with targets or arrows that may occur during the session, including re-pinning loose targets and helping to find lost arrows.
20. As with any other archer, use the Fast or Stop commands to bring shooting to a halt in the event of a safety risk occurring during shooting.
21. Ensure that all equipment is restored to the trolley at the end of the session and that all targets are stored safely away in the target storage area (3). Straw targets should be covered with plastic sheeting and at least two wheeled targets pushed against the straw targets to keep the plastic sheeting in place. Tripod stands are store against the wall – please lie them flat.

Use foam targets to keep protective plastic sheeting in place over straw targets.

22. If any additional equipment is needed from the dry store, the field captain should collect the key from security. Make sure equipment is returned and stored neatly. The dry store

contains additional target faces and all our beginners bows and accessories including sights, tabs and bracers. **Remember to return the key to security before leaving the range.**

23. **No shooting is permitted without a named field captain. There must be a minimum of two adults (18+) for a session to run.**
24. The range distances are indicated by marker flags placed in the rough grass area to the side of the range. Yellow flags indicate distances needed to shoot official British competition rounds in yards: 20, 30, 40, 50, 60, 80 and 100 (five zone scoring – 9 to 1)
25. Red flags indicate distances needed to shoot official World Archery (FITA) rounds in metres and these are 30, 50, 60, 70 and 90.
26. The shooting line is also indicated by a red flag and all distances are measured from the shooting line. A full 100m tape is kept in the equipment trolley for exact placement of targets.
